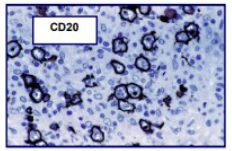
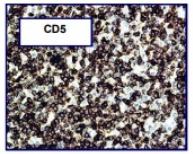
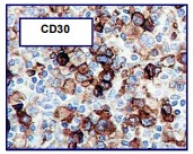
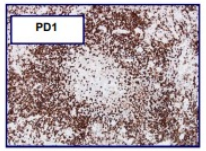
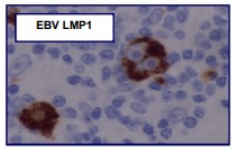
  - CD123





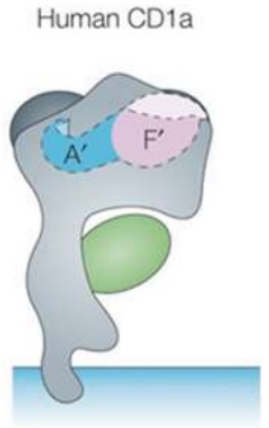




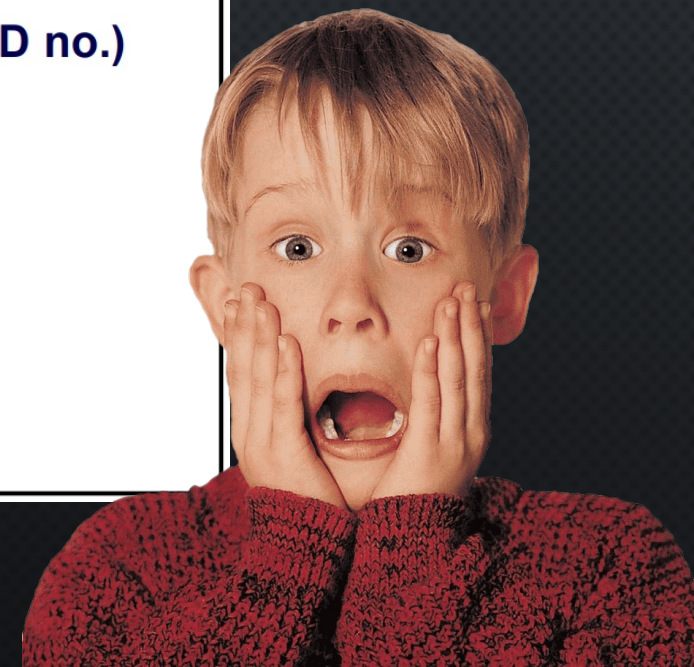


From Stephen Hamilton NordiQC workshop 2023

What are CD numbers?



- CD: ”clusters of differentiation”
- Classification system for antigens (and antibodies)
- Originally for surface antigens on leucocytes
- Now includes other cells and intracellular antigens (no CD no.)
- 10 workshops since 1982
- Currently > 350 CD antigens



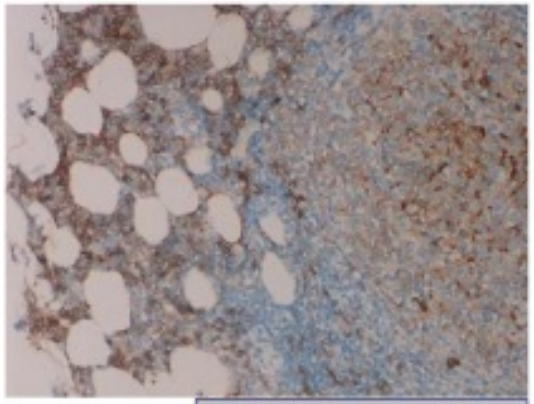
From Stephen Hamilton NordiQC workshop 2023

CD10

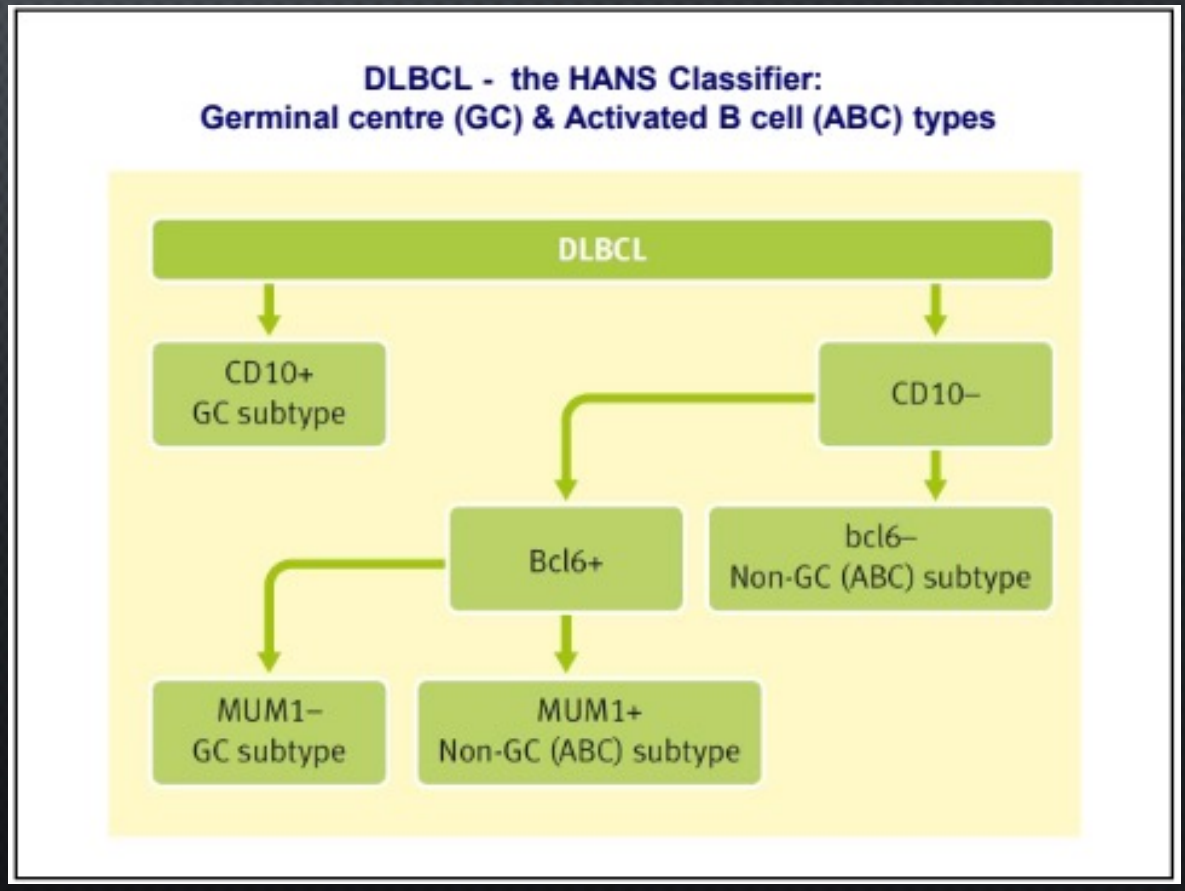
From Stephen Hamilton NordiQC workshop 2023

Secondary stain: CD10

- >90% precursor B-LB (membrane & paranuclear stain)
- ca. 25% precursor T-LB
- Burkitt lymphoma
- Follicular lymphoma
  - Interfollicular CD10+ cells suggets lymphoma
- Some DLBCL
  - 'Cell of origin' algorithm in DLBCL
  - GCB *vs* ABC



- Follicular lymphoma – CD10
- Interfollicular tumour cells



CD10

Immunostainer

Type: Ventana Benchmark Ultra

Run 59 2020

Primary antibody

Clone: SP67

Producer: Ventana/Roche

Incubation time polymer: 8 min.

Incubation temperature: 36°C

"The highest proportion of sufficient results for protocols based on OptiView without amplification was achieved together with 48-64 min. in HIER and antibody incubation of 32 min., which resulted in a pass rate of **78%** (14/18 slides from 11 different laboratories), but only **14%** (3/18) were **optimal**. Both a too weak and also false positive staining was seen in the 4 insufficient results, proving again the lack of robustness of the antibody. " RUN 67

Urgent Field Safety Notice

SBN-RDS-Pathology Lab-2024-001

RDS / Pathology Lab

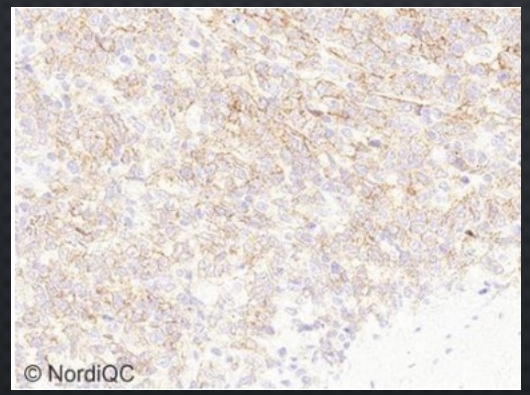
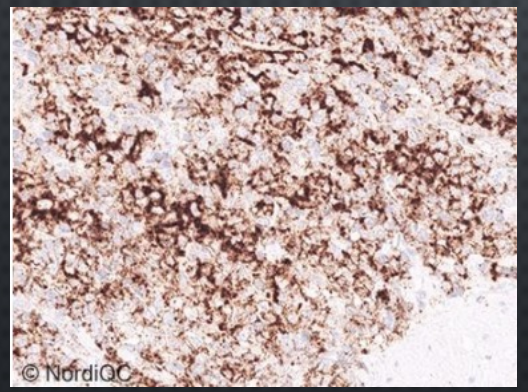
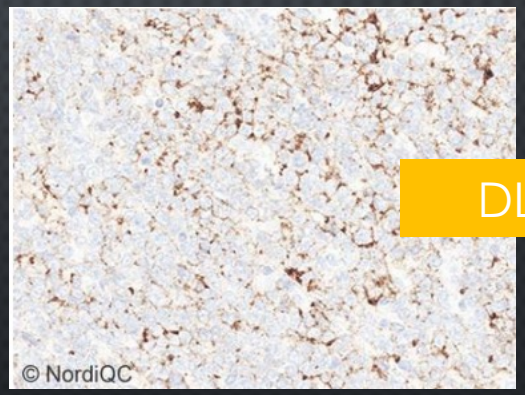
Tonsil

With great power and tyramide comes great responsibility

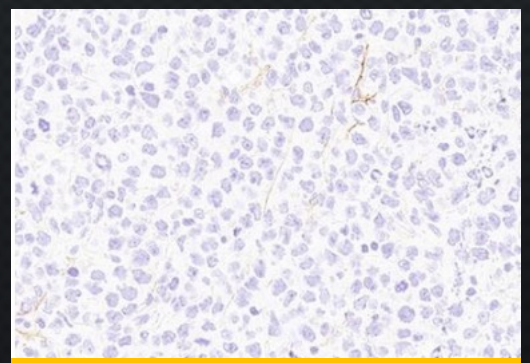




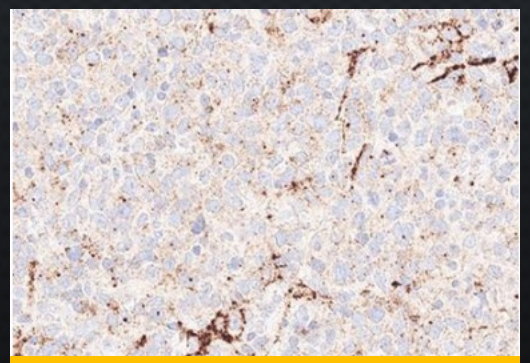


DLBCL - GCB

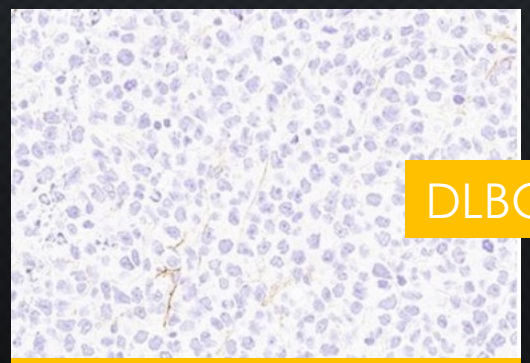
GCB= germinal center B-cell subtype



Optimal



Insufficient



Optimal

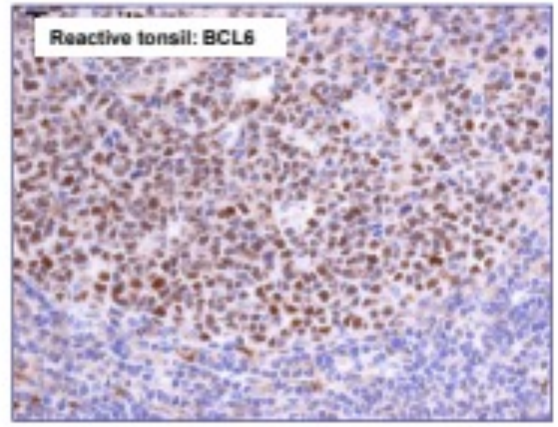
DLBCL – non-GCB

BCL6

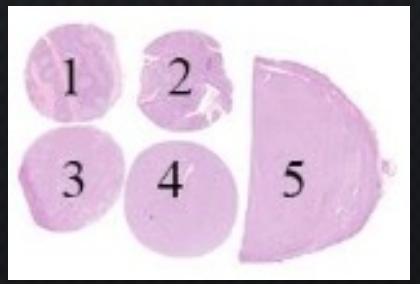
Purpose:
primarily used for subclassification of B-lymphomas and to discriminate Diffuse Large B-Cell Lymphoma (DLBCL) of germinal center B-cell like (GCB) from nongerminal center/activated B-cell (non-GCB/ABC) subtype.

Basic stain: Bcl-6

- Nuclear protooncogene product
- Normal:
  - germinal centre cells
- In lymphomas:
  - follicular lymphoma
  - most BL
  - variable DLBCL
    - 'cell of origin' staining in DLBCL
  - HL-LP (not classical)
  - SLL, MCL, MZL, HCL: negative



From Stephen Hamilton NordiQC workshop 2023



1-2. Tonsils, 3. DLBCL (GCB subtype), 4. DLBCL (non-GCB/ABC subtype), 5. Follicular lymphoma (FL)

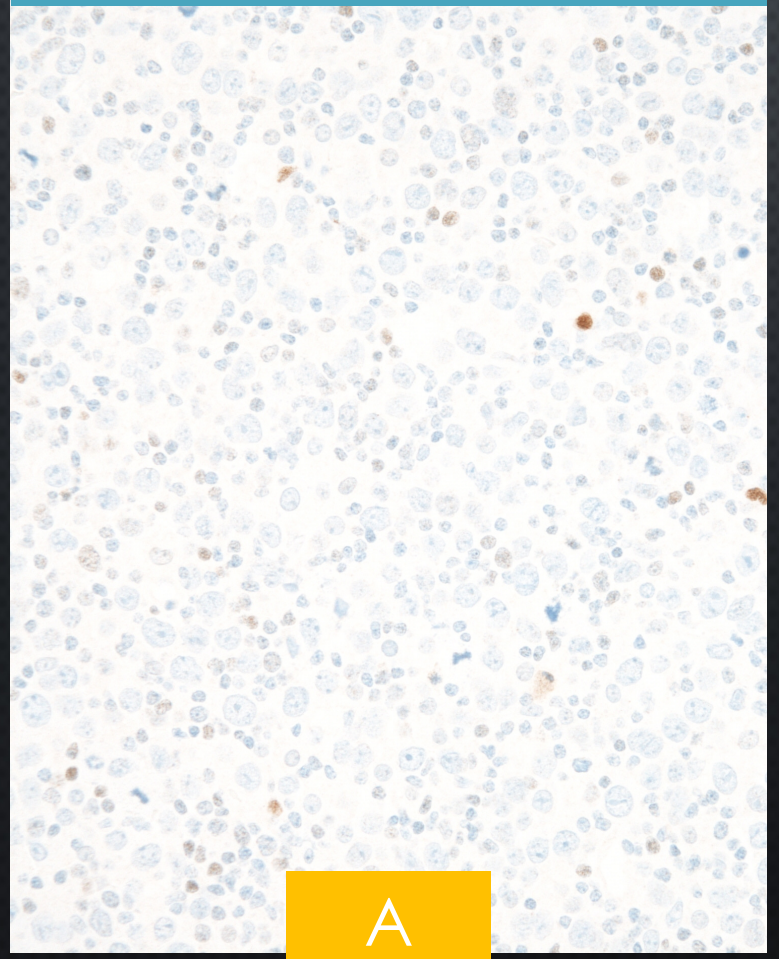
Lowest passrate of the RTU products.

Highest passrate of the RTU products.
LMPS: Prolonging Ab incubation

UltraView protocols did not work.
OptiView protocols only gained optimal in 10%, with a total passrate of 60%

CHOOSE THE OPTIMAL NON-GCB DLBCL = A

LN22 mAb clone LN22 as concentrate, optimally calibrated with HIER in CC1 (32 min. at 100°C) and OptiView as detection system

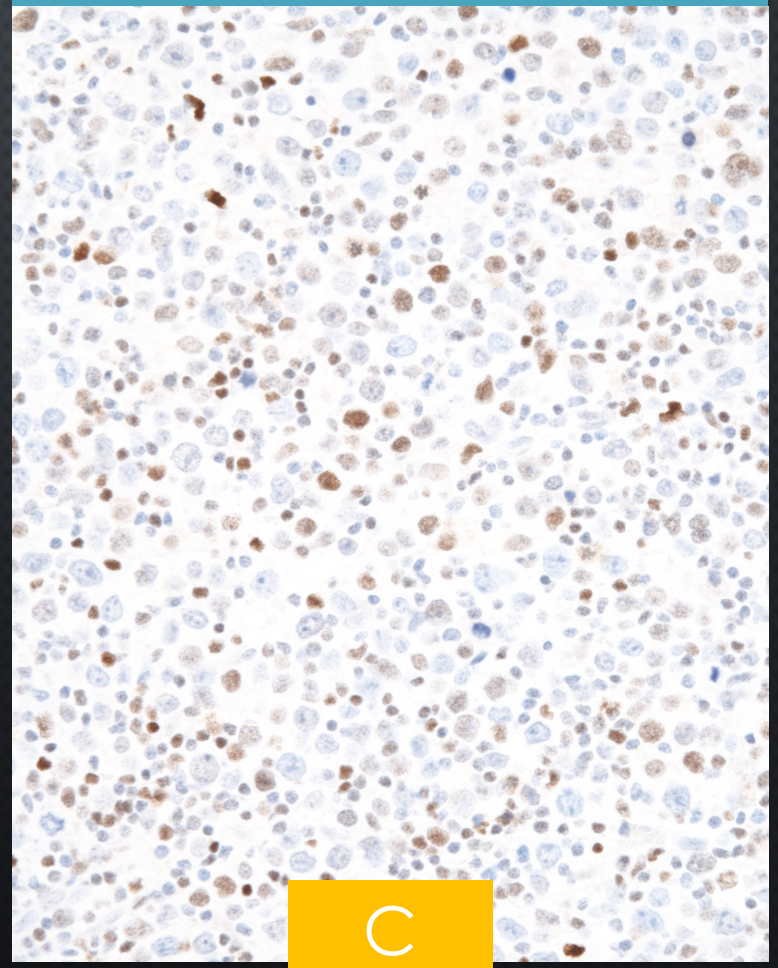


A

RTU product 760-4241 (Ventana/Roche) based the mAb clone GI191/A8, HIER in CC1 (64 min.) and OptiView as detection system

B

Protocol using the RTU product MAB-0746 (Fuzhou Maixin) based the mAb clone MX042.



C

Lymphoma

Hodgkins lymphoma

- HL, LP
- HL, NS
- HL, MC
- HL, LR
- HL, LD

Non-Hodgkins lymphoma

B-cell

- precursor
- peripheral
  - ~32 subtypes

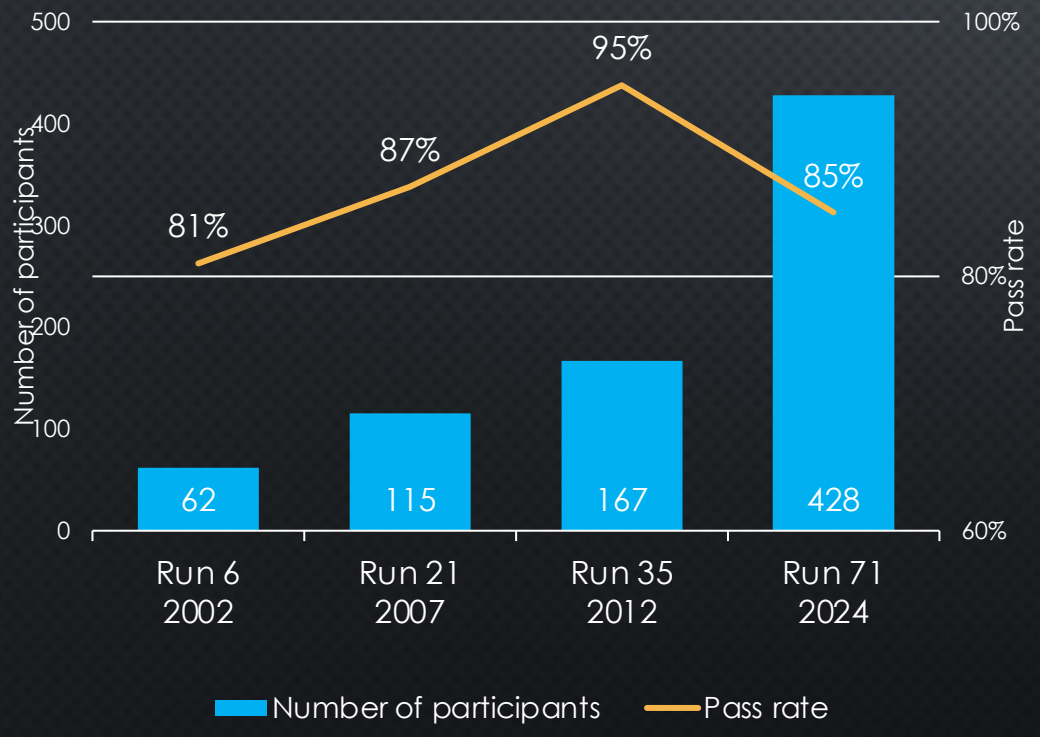
T/NK-cell

- precursor
- peripheral
  - ~20 subtypes

From Stephen Hamilton NordiQC workshop 2023

CD20

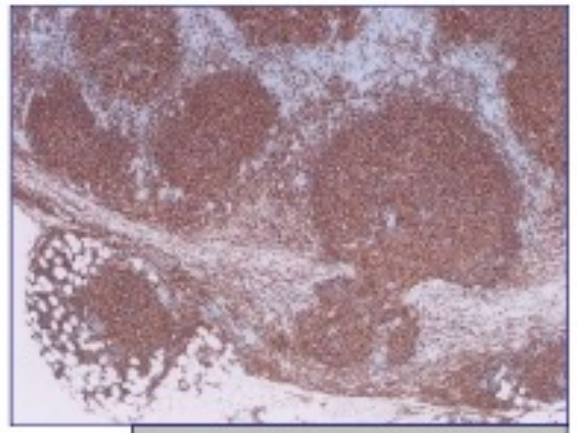
CD20 performance in NordiQC assessments



From Stephen Hamilton NordiQC workshop 2023

Basic stains: CD20

- Many B-cell neoplasms
- Negative in:
  - early precursor B-LB
  - plasma cell neoplasms
- Negative in T-cell lymphomas
  - rare cases positive
- Hodgkins lymphoma
  - HL-LP: 90% positive
  - Other types – variably positive (10% - 30%; not all HRS cells)
- Predictive marker for Rituximab therapy
  - may be aberrantly lost after treatment with Rituximab



Follicular lymphoma: CD20

KEY POINTS FOR CD20 IMMUNOASSAYS

- The mAb clone **L26** was used by 97% of all participants.
- RTUs developed for the Autostainer, BOND and Benchmark platforms gave superior results applying vendor recommended protocol settings
- The performance of the mAb clone L26, both as concentrate and RTU, was less successful on the Omnis platform
- Tonsil and appendix are not reliable tissue controls to monitor the accuracy and precision of CD20 IHC assays.

1. Appendix, 2. Tonsil, 3. Malignant melanoma, 4. Diffuse Large B-Cell Lymphoma (DLBCL), 5-6. B-Chronic Lymphatic leukemia (B-CLL)
